McGILL®
ELECTRICAL/ELECTRONICS

McGill limit and enclosed switches— perfect for your demanding applications.

McGill limit and enclosed switches deliver more. Like a wide variety of operating heads, and field adjustability in all operating modes so you can reduce your inventory.

McGill switches offer the convenience of on-the-spot adjustments, with a complete range of circuitry and electrical ratings. Our plug-in and non plug-in switches have identical operating characteristics and are dimensionally interchangeable.

And McGill switches meet NEMA 1, 3, 4, 4X (stainless steel only), 6 6P (prewired switches only) and 13 standards as noted and are UL listed and CSA certified.

Check out these additional important features of McGill switches!

Experience longer mechanical life and operational reliability due to our front and rear oil impregnated sintered bronze shaft bearings on stainless steel operating shaft.

Tracking interchangeability of actuator levers for single and double-pole switches, plug-in and non plug-in switches makes adapting to changing requirements easy.

Boss-and-socket head design for secure head-to-body retention.

All-metal drive train delivers consistent operating characteristics at high temperatures for longer life without need for frequent adjustment other drive trains that use plastic parts require.

Self-lifting pressure plate terminals save wiring time.

Front mounting and interchangeability of single- and double-pole switches, plug-in and non plug-in with one another and with other switch brands.

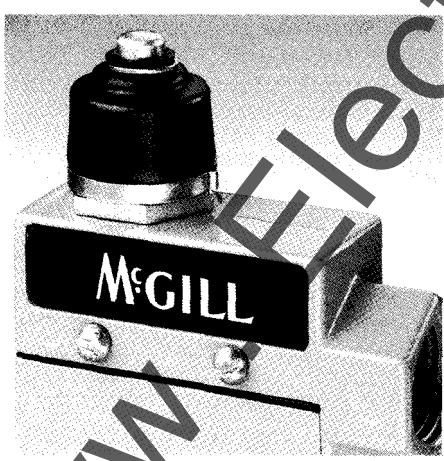

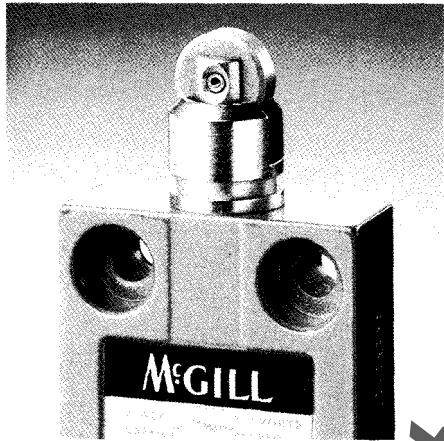

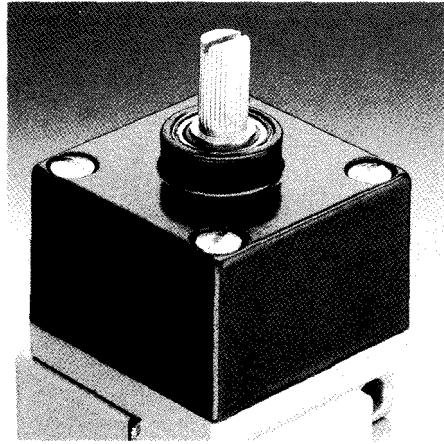

Built-in "extra" protection with these twin shaft seals.

Viton™ shaft and diaphragm seals on side rotary switches for performance in a variety of environments.

Easily identified grounding terminal inside assures compliance with OSHA and other regulatory agencies.

Corrosion-resistant zinc head and body are phosphate treated and epoxy finished for rugged performance.

Enter the world of high performance with McGill limit and enclosed switches.

ROTARY ACTUATION

The characteristics of McGill switches throughout this catalog are chosen as most significant. The sketches indicate how these characteristics are measured for in-line plunger actuation and rotary actuation.

Linear dimensions for in-line actuation are from top of plunger to a reference line —typically the center of the mounting holes. (For flange or bottom mounted switches, the reference is the bottom of switch. Rotary actuated and limit switches have characteristics in degrees of angular rotation. Operating characteristics dimensions of these switches with rotary actuators are listed in linear dimensions with the adjustable level in one extreme position.

Differential Travel (D.T.). Plunger or actuator travel from point where contacts "snap-over" to point where they "snap-back."

Free Position (F.P.). Switch plunger/actuator's position with no external force (other than gravity) applied to it.

Full Overtravel Force. Force required to attain full overtravel of actuator.

Operation Position (O.P.). Switch plunger/actuator's position at point contacts snap from normal to operated position. For flexible or adjustable actuators,

O.P. is measured from end of lever or maximum length. See mounting dimension drawings for location of operating position measurement.

Operating Force (O.F.). Amount of force applied to switch plunger/actuator to cause contact "snap-over." For adjustable actuators, force is measured from maximum length position of lever.

Overtravel (O.T.). Travel safely available beyond operating position of plunger or actuator.

Pretravel (P.T.). Distance/angle traveled in moving plunger/actuator from free position to operating position.

Release Force (R.F.). Amount of force still applied to switch plunger or actuator at moment contacts snap from operated position to unoperated position.

Total Travel (T.T.). Distance from actuator free position to overtravel limit position.

Reference Standards

UL and CSA references used in this catalog do not imply specific approval of products. However, our products are designed to meet the safety and performance standards of such agencies. Evaluation of products by these agencies is limited to procedures established to examine switch performance within areas of their interest. Actual application requirements may exceed performance levels investigated by such agencies. We strongly recommend switches be tested to your exact application requirements.

UL (Underwriter's Laboratories, Inc.).

A non-profit organization chartered to establish, maintain and operate laboratories for the examination and testing of devices, systems and materials.

CSA (Canadian Standards Association).

Non-profit, non-governmental association established as a national standardization body for Canada. Included in scope of activities is responsibility for investigating and approving products and materials in the interest of safety.

NEMA (National Electrical Manufacturer's Association).

Prepares standards which define product, process or procedure with reference to one or more of following: nomenclature, composition, construction, dimensions, tolerances, safety, operating characteristics, performance, quality, electrical rating, testing and service for which designed. Reference standards available.

Enclosure Types

Enclosures are based in general on broad definitions outlined in NEMA standards. Therefore, it is necessary to ascertain that a particular enclosure will be adequate when exposed to specific conditions that may exist in intended applications. Except as noted, all references to products relative to NEMA enclosures types are based on McGill evaluation only.

Non-Hazardous Locations

- **Type 1** enclosures are intended for indoor use primarily to provide a degree of protection against contact with the enclosed equipment.
- **Type 3** enclosures intended for outdoor use primarily to provide a degree of protection against windblown dust, rain, sleet and external ice formation.
- **Type 4** enclosures are intended for indoor/outdoor use primarily to provide a degree of protection against windblown dust and rain, splashing water and hose-directed water.
- **Type 4X** enclosures are intended for indoor/outdoor use primarily to provide a degree of protection against corrosion, windblown dust and rain, splashing water and hose-directed water.

- **Type 6** enclosures are intended for indoor or outdoor use primarily to provide a degree of protection against the entry of water during occasional temporary submersion at a limited depth.

- **Type 6P** enclosures are intended for indoor/outdoor use primarily to provide a degree of protection against the entry of water during prolonged submersion at a limited depth.

- **Type 12** enclosures are intended for indoor use primarily to provide a degree of protection against dust, falling dirt, and dripping noncorrosive liquids.

- **Type 13** enclosures are intended for indoor use primarily to provide a degree of protection against dust, spraying of water, oil, and noncorrosive coolant.

Hazardous Locations

- **Type 7** enclosures are for indoors in locations classified as Class I, Groups A, B, C, or D by the NEC.

Group A—Acetylene.

Group B—Atmospheres containing hydrogen manufactured gas.

Group C—Atmospheres containing diethyl ether, ethylene or cyclopropane.

Group D—Atmospheres containing gasoline, hexane, butane, naptha, propane, acetone, toluene or isoprene.

- **Type 9** enclosures are for indoor locations classified as Class II, Groups E, F or G as defined by the NEC.

Group E—Atmospheres containing metal dust.

Group F—Atmospheres containing carbon black, coal dust or coke dust.

Group G—Atmospheres containing flour, starch or grain dust.

1506 Series Rotary Actuated Switches

McGill 1506 Series switches are plug-in body style. Catalog listings consist of the complete plug-in base receptacle. Order levers separately (see page 10). Switches and plungers are factory assembled with:

- shaft of side rotary heads or side plungers facing front of switch (label side)
- head adjusted for both clockwise and counterclockwise operation

- light on indicator versions wire to N.O. circuit

- rollers on side plungers are in horizontal position

- roller on top plungers are parallel to mounting surface.

Wobble actuated switches have flexible levers which may be operated with any movement, except direct pull.

NOTE: electrical ratings are for 10A continuous carry. Circuits on any one pole must be the same polarity. NEMA 1, 3, 4, 6 and 13.

1505 Series Miniature Pre-Wired Enclosed Switches

McGill 1505 Series miniature switches are pre-wired at the factory with industrial quality cable (SJTO). They eliminate the need to wire at the switch, making them ideal for use in limited access areas. Gang mount to build multi-plunger switch .63" between plunger.

Cable electrical connection and switch

terminals are encapsulated in an epoxy compound. An elastomer seal between the plunger and switch housing, plus mounting screw holes with continuous walls, keep liquids from entering the switch cavity. The seal boot offered on the McGill 1505-0200 model prevents contaminants from impeding plunger movement.

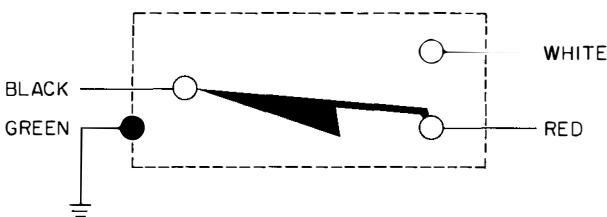

You also have a complete range of actuators to chose from, including plain plungers, roller plungers, side rotary. Any of our levers can be used with the side rotary 1505-0150 switch. All our switches comply to NEMA 1 and 3 enclosure standards, and are UL listed and CSA certified.

1. UL Rating: 5A, $\frac{1}{10}$ HP, 125 or 250VAC. All cable lengths 3 ft. (0.91m).

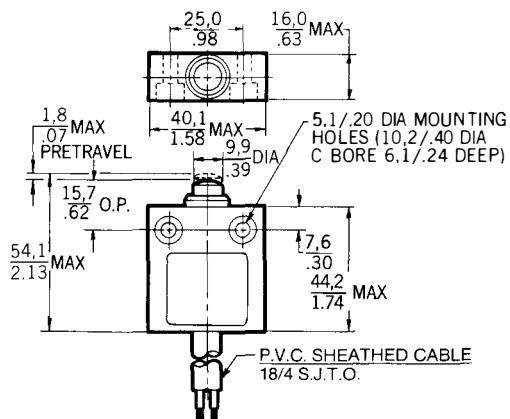

2. Switch operates on clockwise and counterclockwise rotation of lever shaft. Use same levers as 1506 Series.

NOTE: All McGill switches shown in these drawings are 1.74-in. (44.2mm) high, 1.58-in. (40, 1mm) wide and .63-in. (16, 0mm) deep, excluding actuators.

1502 Series Compact Enclosed Switches

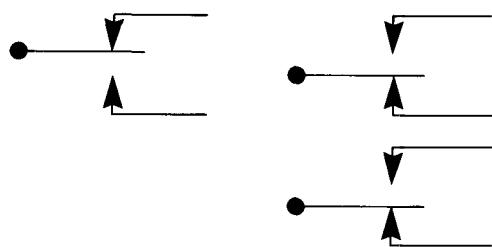

McGill 1502 Series side and flange mounted switches are available with or without actuator seal boots. They have combination insulator/seal cemented inside the bottom enclosure. Lead washers are used to seal the mounting holes on side mount switches. All side mounts are installed with #6 screws. Removal of the bottom enclosure exposes the terminals for easy wiring. They are UL listed and CSA certified. NEMA 1 Rated

1503 Series High Capacity Enclosed Switches

McGill 1503 Series switches feature an elastomer boot on the sealed actuator and cover seal on all types to protect the actuating mechanism and internal components from contaminants. The cover plate is removed for easy wiring and replacement without need to demount the switch. A sealed gasket between the cover plate

and enclosure provides extra protection.

The actuator position is designated "right" or "left" when looking at the nameplate. All our switches are UL listed and CSA certified and meet NEMA enclosure standards 1, 3*, 4*, and 13*.

*Except 1503-0350 and 1503-0352
